Web App : 1 change(s)

General : 1 change(s)

Bug Fix : 1 change(s)

THIS IS A TEST TASK 1

Dev Ref: 3601

Related Issue: 95850, 95910

Docker Hub Integration:

* Introduced dockerhub api to check the tag status of the current sprint directly from the GGR view via the new "Check Dockerhub Build" button.

Email Template Adjustment:

* The "Send Global Release Mail" button has been updated to send emails from the Company's email address instead of the currently logged-in user.

* Email subject has been fixed.

New Email Actions:

* Added two new action buttons:

* "Send Sprint Ready for Testing Email"

* "Send QA Signoff Email"

Desktop Info Enhancements:

The Desktop Info section now includes two new tabs: Config and Actions.

* Under Config, users must populate the following fields to enable build actions:

* Continuum Project ID

* Continuum Test Build ID

* Continuum Production Build ID

* Under Actions, the existing "4. Build Desktop Release" button has been replaced by:

* "4. Build Desktop Release (Test)"

* "4. Build Desktop Release (Production)"

* These buttons use the values from the Config tab to execute builds accordingly.

Improved Publish Workflow:

* The Publish button now also includes the .7z and .exe files along with the release notes as part of the publishing process.

Sequential Button Visibility:

* Action buttons on the GGR view are now displayed in sequence. For example, "2. Generate Release Notes" will only become visible after "1. Create Odoo Release" has been used, enforcing the correct order of operations.

Enhanced Logging:

* The oe_chatter has been improved to log all button actions performed on the GGR. Any issues encountered during these actions will also be logged for traceability.

Access Control Improvements:

* A new GGR Manager group and access rule has been added to the goodx.global.release model to better control who can manage global releases.

Improved Task Migration Logic:

* The "Move Tasks and Issues" button now checks whether tasks have already been moved. If a task's stage was already updated by a previous run of the button, it will skip those tasks during subsequent executions. Specifically, it avoids moving issues where the task_stage is already equal to the stage defined in the Config tab.
